

Shahnawaz Alam

Technical Lead | Front-End Developer

shahnawaz.a.dev@gmail.com | +91 9717060621 | *Delhi, India* | <https://www.linkedin.com/in/shahnawaz-alam-6548631b/>

PROFESSIONAL SUMMARY

Technical Lead with 10+ years of front-end engineering experience across Banking, Insurance, and Telecom domains, specializing in React, Redux, Angular, JavaScript, and TypeScript. Skilled in component-driven architecture, state management, REST API integration, and unit testing, with a strong record of leading front-end teams, mentoring engineers, and driving code quality through structured reviews. Experienced in AI-assisted software development, including spec-driven development with GitHub Spec Kit, AI-assisted coding workflows, and AI-powered design-to-code tools such as Google Stitch, to accelerate delivery without compromising quality.

CORE SKILLS

Frontend Development: React, Redux, Angular (AngularJS, Angular 4+, Angular 8), JavaScript (ES6+), TypeScript, HTML5, CSS3, jQuery, Tailwind CSS, Bootstrap

AI-Assisted & Spec-Driven Development: GitHub Spec Kit, AI-Assisted Coding (GitHub Copilot, Claude), Google Stitch (AI Design-to-Code), Prompt Engineering

Engineering Practices: Unit Testing, REST API Integration, Code Reviews, Performance Optimization, Component-Driven Architecture, Agile/Scrum

Tools & Platforms: Git, SVN, SonarQube

PROFESSIONAL EXPERIENCE

HCL Technologies

Technical Lead

July 2021 – Present

- Led front-end delivery for enterprise applications across Banking, Insurance, and Telecom domains using React, Redux, and Angular.
- Translated Figma/UX specifications into pixel-perfect, responsive user interfaces using a reusable, component-driven approach.
- Adopted spec-driven development practices using GitHub Spec Kit to structure requirements before AI-assisted implementation, improving alignment between specifications and delivered code.
- Used AI-assisted coding tools (GitHub Copilot, Claude) and Google Stitch to accelerate UI development from design to working code.
- Directed the design and development of an AI-powered code review agent and an AI-driven data pipeline generation platform (see Key Projects).
- Conducted code reviews, enforced engineering standards, and mentored junior developers.
- Improved application maintainability and performance through lazy loading, bundle optimization, and API efficiency improvements.
- Collaborated with backend, QA, and UX teams to deliver features on schedule and to quality standards.

Lead Engineer

April 2016 – June 2021

- Built responsive, design-aligned web applications using Angular 8, AngularJS, HTML5, CSS3, and TypeScript.
- Integrated REST APIs and implemented reusable modules, improving runtime performance through lazy-loaded features.
- Partnered with backend teams to define API contracts and deliver end-to-end integrations.
- Resolved defects across QA, pre-production, and production environments, and contributed to post-release patches.
- Worked within Agile/Scrum, contributing to sprint planning, estimation, and daily standups.

KEY PROJECTS

AI-Powered Code Review Agent — *Technical Lead*

Internal tool automating code review using AI and static analysis.

- Built an AI-assisted code review agent integrated with SonarQube analysis to surface remediation recommendations automatically.
- Improved code quality and reduced manual review effort across engineering teams.

Data Pipeline Generation Platform — *Technical Lead*

Internal platform generating data pipelines from metadata using AI.

- Led development of an AI-powered platform that generates data pipelines directly from metadata definitions.
- Automated development workflows and reduced manual coding effort for pipeline creation.

SAP Fieldglass — *Frontend Developer*

Technology: React, Redux, HTML5, CSS3, JavaScript, Bootstrap, Unit Testing, REST API

Enterprise SaaS platform for managing external workforce, with strict requirements for security, privacy, and availability.

- Built and refactored reusable React components and modules with robust state management.
- Implemented REST API integrations and unit tests to improve reliability and regression safety.
- Performed code reviews and defect fixes, and collaborated across teams for secure releases.

Individual Dental (Majesco) — *Frontend Developer*

Technology: React, HTML5, CSS3, JavaScript, REST API

Dental insurance portal enabling customers to explore and purchase plans by ZIP code.

- Developed React components and data-driven views for plan discovery and purchase flows.
- Managed code reviews, bug fixes, and release readiness in coordination with QA.

Digital1st Platform (Majesco) — *Frontend Developer*

Technology: Angular 4 to React 17, TypeScript, JSON, Bootstrap, Unit Testing

Migration of Majesco's Smart Renderer UI components from Angular (Gen 1) to React (Gen 2).

- Converted Angular components to React while aligning with new layouts and redline specifications.
- Ensured UI consistency and resolved defects throughout the migration.

E-Deposit (Deutsche Bank) — *Frontend Developer*

Technology: Angular 8, TypeScript, HTML5, CSS3, JavaScript, REST API

Online banking module supporting electronic deposit services.

- Developed feature modules, performed code reviews, and fixed defects.
- Coordinated API finalization and integration with backend teams.

Consolidated Card Checkout (AT&T) — *Frontend Developer*

Technology: AngularJS, HTML5, CSS3, JavaScript, Bootstrap, JSON, JSP, REST API

Checkout flow for AT&T, a telecommunications provider offering mobile, internet, and TV services.

- Built checkout flows and addressed production issues in a fast-paced Agile environment.
- Managed defect triage and handoffs to QA, contributing to daily standups.

EDUCATION

Master of Computer Applications (MCA)

Uttar Pradesh Technical University, Lucknow, Uttar Pradesh, India
